Is the System Fair?

The person who removes the last box WINS!!!

GAME 1:

- Two people playing against each other take turns removing 3 boxes from a pile of 18 boxes.

GAME 2:

- Two people playing against each other take turns removing 2 boxes from a pile of 18 boxes.

### Is the System Fair?

For each game:

- Write an expression that represents the number of boxes left at the end of each turn
- **REMEMBER:**  
 **$x$  is the number of boxes at the start of each turn**
- Can you predict who will win the game?

### Is the System Fair?

#### EXTENSION:

- Two people playing against each other take turns removing either 1, 2, or 3 boxes from a pile of 18 boxes.
- The person who removes the last box or boxes wins the game.
- Play the game several times, keeping track of who goes first, how many boxes are removed on each turn, and who wins.
- Extension: Play the same game, but, this time change the number of total boxes from 24 to another number.

In your journals, answer the question below.

**Why do we use variables or symbols in Algebra?**
